STUDIES ON INFANT AND TODDLER SPEECH PERCEPTION

CALL FOR INFANTS AND TODDLERS WITH NORMAL HEARING AS RESEARCH PARTICIPANTS

Investigator: Susan A. Small, Ph.D., Associate Professor

Are you interested in learning how early auditory experience affects brain development?

Infants and toddlers are required for this study. We are interested in studying the role that early experience with sounds plays in the development of language. By recording electrophysiological responses (ERPs) from sensors attached to the head, information about children's speech perception will be obtained. A quick hearing screening will also be conducted.

If your child is between 2 and 4 years old, has no middle-ear infections and no history of neurological problems, s/he may be eligible to participate.

Participation involves only 1 session, which takes approximately 1.5-2.0 hours. All testing will be conducted in our lab at UBC. You will be reimbursed for the parking and a t-shirt will be given to your child for participating in the study.

For further information, please contact:
