PhD position in Barriers to Hearing Health

Funded full-time PhD position addressing barriers to hearing health care for adults in BC, starting January 2022. No specialized knowledge of audiology is required. Dr. Lorienne Jenstad will be the primary supervisor of the student, with additional interdisciplinary supervisors.

The primary project of the successful candidate involves developing strategies to support primary care providers in ensuring their patients with hearing concerns access hearing health care in British Columbia. Methodology will include systematic literature reviews, surveys, participatory action research, and integrated knowledge translation.

Background and relevant experience required: Must have a Master’s degree in one or more of the following or closely related fields: audiology, medicine, health systems, public health, interprofessional practice and education. Preference for applicants who are familiar with the Canadian health care system, or have experience with focus groups, mixed methods, survey methodology, or systematic literature reviews.

Please get in touch with a CV, statement of interest, & unofficial transcript by June 15th for review by the nominal supervisor (email to jenstad@audiospeech.ubc.ca) (Step one of the application process listed here: https://audiospeech.ubc.ca/prospective-students/phd-program/application-process/). The successful candidate will then need to submit a formal application by August 1st. (Step two at the same link).

Please ensure that you will be able to meet the requirements of the formal application here: https://audiospeech.ubc.ca/prospective-students/phd-program/application-process/.
